

## Residential Meter Testing

### Accuracy Testing at Any Scale

With over 40 years of residential water metering experience, Mid America Meter provides expert-led residential water meter testing to support your revenue management and sampling programs, billing dispute resolutions, and meter changeout projects.

### Accuracy Sampling

#### Prevent Revenue Loss

With extensive experience developing, implementing, and supporting accuracy-driven residential water meter sampling programs, you can trust the experts at Mid America Meter to help fine-tune a sampling process that meets AWWA and organization-specific accuracy standards.

When it's time for each sample, Mid America will schedule a pick-up time, bring your meter(s) to our shop for testing, and provide a detailed results report in your preferred file format.

---

### Meter Changeouts and Exit Certification

#### Meet Testing Requirements With Ease

Whether you're replacing 50 meters or 5,000, count on Mid America to design a testing program that minimizes shipping and testing costs and makes exit certification easy and efficient.

We work with municipalities, utility contractors, and installation teams to certify that residential water meters removed during changeouts meet local, state, and other requirements for testing procedures, accuracy standards, and meter disposal.

---

### Billing Dispute Resolution

#### Provide Third-Party Assurance to Your Customers

We offer independent third-party testing to help cities, park owners, utility billing companies, and others resolve disputes with residents and customers.

After sending your meter(s) in, you'll receive a detailed report that outlines your meter's accuracy at maximum, intermediate, and low-flow rates, along with a helpful comparison to AWWA standards.
